

AFO 02 - stainless steel free-standing drinking fountain

AFO 02 is a stainless steel drinking fountain of modern design with a manual press valve that allows its easy use. The water flows only when the valve is pressed and then there is a certain adjusted time to rinse out the nozzle. The drinking fountain is to be placed in an open space. It is made up of an anchoring part intended for embedding in concrete and the column itself with a press valve and nozzle. These parts are connected by means of 3 screws and the upper part can be, therefore, easily dismantled in case of necessity (e.g. during winter). The water inlet is fitted with a flexible hose, the siphon is made from a stretchy, flexible connector. The flexible finish of the water inlet and outlet allows the variable and problem-free connection of the fountain. AFO 02 stainless steel fountain is suitable mainly for schools, medical facilities and spa resorts, and is utilizable outdoors. It is manufactured from the stainless steel AISI 304. Other materials (e.g. AISI 316) possible on order. For cleaning we recommend WÜRTH detergents ? material preservation (no. 0893 121 K) and material cleaning (no. 893 121 1).

Complete delivery

1. stainless steel column and cone with nozzle
2. press valve
3. anchoring construction
4. flexible hose siphon
5. connecting hoses
6. anchoring material

Requirements for setting up the construction

1. Set-up water inlet - pipe G 1/2"
2. Set-up drainage d = 40 mm
3. Prepared alcove for embedding in the base construction
