

KV 03 - cantilever for VL 03

VL 03 is a stainless steel bucket sink with full-open grid and round inner corners designed mainly for food processing industry and kitchens. Its construction ensures resistance against damages and the full-open grid can serve as for putting a bucket or for filling and pouring the water. The round inner corners make the maintenance easier because the sediments do not get stuck in the corners. The sink can be fixed onto a wall by means of cantilever KV 1 or put to a free space on SV 01 column. Bucket sinks than mentioned in catalogue as standard with other dimensions of sink and outlet can be made as per order. The VL 03 stainless steel bucket sink, in its construction and finish, meets EU standards. It is designed for food operations.
