

## MAD T1, MAD T1S - coin-operated turnstile

Passing through the turnstile is possible only after inserting required amount of money into the coin-operated automat. The value of coins inserted is added up to required amount for passing through. Automat accepts two different currencies (standardly CZK and ?), the owner can set the price per entry independently for each currency. Also special tokens can be used for free entry (e.g. operation staff or cleaning service). The coin automat is manufactured in stainless steel vandal resistant version. All versions are quipped with anti-panic system ? the arm will be folded down automatically in case of power failure. External button for forced folding of arm by operating staff is possible on order.
