

AMS 01.1 - automatikus páramentesítő zuhany, időzítéssel - 230 V, 50 Hz

The AMS 01 is an automatic shower disinfection unit. After the disinfection cycle, the shower is ready for use. The shower consists of a control unit, a timer (AMS 01) and two shower heads (RS 01). During the rotation of the shower heads, the disinfection cycle occurs. The disinfection cycle is divided into two stages, so the difference in temperature between the food surface and the inside is reduced. The water consumption is low. The disinfection cycle is completed after a set time (AMS 01.1) or after the food reaches the required temperature (AMS 01.2). The temperature is measured by a sensor. The disinfection cycle can be stopped by pressing the STOP button. The shower heads can be adjusted individually. The order must specify the number of shower heads.
